

600VA Toroidal Transformer with rectifier and a 100000myF Filter Capacity, 24V, soft started with TSRL without Option “ andimmen”

A 16 A B-type line circuit breaker dont trips,
Transformer Inrush current peak is avoided

Capacity is not loaded while soft start

The premagnetizing voltage pulses are for a transfo
without capacity a little to broad adjusted, they has the
same width like in graphic profil07.cdr,
(loaded capacity with 10 ohm.)
